FOR IMMEDIATE RELEASE

CNIM EXAMINATION PROGRAM EARNS NATIONAL ACCREDITATION

The American Board of Registration of Electroencephalographic and Evoked Potential Technologists (ABRET) is pleased to announce that the National Commission for Certifying Agencies (NCCA) has granted accreditation to the ABRET CNIM program for a period of five years.

ABRET maintains a voluntary credentialing program for technologists monitoring neurophysiologic functioning during surgical procedures. Success on a comprehensive examination that measures recognized competencies culminates in the awarding of a Certification in Neurophysiologic Intraoperative Monitoring (CNIM).

Accreditation status demonstrates to the profession and the public that a program has undergone an independent or third party review of practices, and meets the established standards for accreditation. For ABRET, accreditation will demonstrate that the examinations are psychometrically sound and legally defensible. For ABRET certificants, NCCA accreditation is a symbol of quality and means the credentialing program complies with national standards.

NCCA has accredited programs from approximately 150 professions and occupations, including 60 healthcare professions. For a complete list of accredited programs, see www.noca.org.

ABRET is the credentialing board for EEG, Evoked Potential, Neurophysiologic Intraoperative Monitoring Technologists and Long Term Monitoring Technologists. ABRET has been credentialing technologists for over 40 years.
